PyTest Naming Conventions for compar

When using pytest, it is very important to follow naming conventions.

If we don't follow naming conventions, then pytest will not pick up tests from the file....

- **File names should start or end with "test"**, as in test_example.py or example_test.py
- **Class name should start with "Test"**, as in TestExample
- Test method names **should start with "test_"**, as in test_example

You can refer to the official documentation for more details:

http://pytest.readthedocs.io/en/reorganize-docs/new-docs/user/naming_conventions.html

Sprint 1		Done
Sprint 2	To do
